Aims and Scope

The Journal of Pathology is a journal of the Pathological Society of Great Britain and Ireland. The aim of the Journal is to publish high quality papers in the fields of pathology and clinico-pathological correlation. Papers dealing with new aspects of histopathology and significant collections of cases are welcome. Single case reports are accepted when they are of particular interest and can be used to convey important messages of new information. They should include a full, but concise, review of the literature. Emphasis will be placed on the quality of the illustrations in all publications. Articles in the field of experimental pathology, relevant to the understanding of human disease, are welcome, as are papers on the use of techniques such as immunology and molecular biology to elucidate disease mechanisms.

Review articles, dealing with general and experimental pathology, as well as diagnostic histopathology, are published regularly. Unsolicited reviews are accepted if they are clearly written and topical. The Editorial Board wishes to encourage articles on the teaching of pathology at the undergraduate and post graduate level, including articles on curricula and teaching methods. Editorials, a letter column and reviews of recently published books form a regular feature of the journal. Meetings abstracts of the Pathological Society of Great Britain and Ireland are published in the issue of the Journal immediately following the meeting. The annual CL Oakley lecture in the field of pathology is published as soon as possible after its delivery. Symposia proceedings may be published if the editors consider them appropriate and relevant. The editors wish to maintain the minimum delay between manuscript submission, decision and publication, and authors are requested to follow the instructions for manuscript preparation, as set out in the Notes for Contributors which are printed on the inside back cover.

It is the wish of the Editorial Board that the contents of the Journal will be of interest and value to all engaged in the fields of diagnostic and experimental pathology and also to other workers, outside the immediate field of pathology, interested in disease mechanisms and clinico-pathological correlation.
